Auburn Engineering: Looking deeper at what ails you

Being sick is no fun. Not knowing what's wrong makes matters worse. Sometimes, it takes high-tech equipment that can see deep inside your tissues, organs and nerves to figure out what's keeping you from feeling well.

Auburn University and Siemens have signed a research agreement to do just that and develop the MRI Research Center at Auburn University. Electrical engineering faculty member Tom Denney will serve as director of the center, which will house the only actively shielded, human-scaled 7T MRI unit in the nation.

This alliance with one of the world's largest suppliers to the health care industry advances Auburn to the forefront of medical imaging research and brings life-saving innovation to the South.
